

Amendments to the Claims:

1. (currently amended) A method of propagating presentation code to a client said client using a constrained function presentation engine, said method comprising:
 - identifying style information within said presentation code at a server;
 - resolving, at said server said style information to a subset of said style information;
 - ~~providing said subset of style information to a constrained function presentation engine;~~
 - compressing, at the server said presentation code including said subset of said style information to provide a binary-encoded file ~~via~~ for use by said constrained function presentation engine, said subset of said style information represented within said binary-encoded file;
 - validating said binary-encoded file to provide an error-free binary-encoded file at the server;
 - propagating said error free binary-encoded file toward said client;
 - translating said error free binary-encoded file into a document tree containing a plurality of nodes at said client, wherein said translating includes non-validating parsing to avoid expending memory and computational resources on error correction and error detection at said client, wherein each one of said plurality of nodes represents said subset of said style information, wherein each one of said plurality of nodes comprises at least one user manipulable property; and
 - modifying at least one of said plurality of nodes in response to a received user interaction with the document tree at said client,
 - wherein said resolving said style information comprises two or more of:
reducing the number of style properties, deleting style rules, and simplifying style dependencies in said style information.
2. (cancelled)

3. (currently amended) The method of claim 1, ~~wherein:~~ wherein said presentation code is substantially compliant with an HTML/CSS system.
4. (currently amended) The method of claim 3, ~~wherein:~~ wherein said presentation code comprises at least one of in-line XML styles and CSS style sheets.
- 5-6. (cancelled)
7. (currently amended) The method of claim 1, further ~~comprising:~~ comprising adapting the style resolving process in response to an indicium of capability of a client.
8. (original) The method of claim 7, wherein said indicium comprises a control signal received from the client.
9. (currently amended) The method of claim 1, ~~wherein:~~ wherein said presentation code comprises a markup file and associated CSS style sheets.
10. (cancelled)
11. (original) The method of claim 1, further comprising compressing common resolved styles.
- 12-14. (cancelled)
